BROADCAST YOUR MICROSCOPE'S VIEW

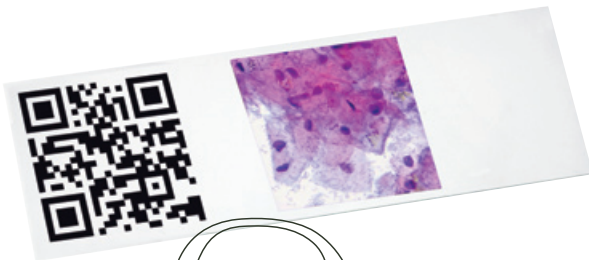

With our innovative software, **PathoZoom® LiveView**, several users can view and discuss a slide online simultaneously. The microscopy image is transferred in real time from the microscope to one or more colleagues.

So your current teaching or discussion microscopes become obsolete. Software handling is self-explanatory and very easy for the user.

This makes PathoZoom® LiveView great for the following:

Frozen sections: Connect directly to the microscope of your colleague and discuss a case together.

Presentations: Show your slides at conferences and tumor boards. Everyone can connect to the live image with their smartphones.
